remi-rossello.up.railway.app

github.com/Remi-Rossello

HARD SKILLS

- Python
- Linux
- Full-stack development
- Agentic AI (litellm, crewai, pydantic)
- RAG, MCP, LLMs
- Cloud computing (AWS)

Backend

- Docker, PostgreSQL, NodeJS, AWS, RustFS

Frontend

- TypeScript, React, Vite, Playwright, FastAPI

SOFT SKILLS

- Curiosity & Adaptability
- Eagerness to learn
- International teams
- Startup environment

INTERESTS

- Artificial Intelligence
- Astronomy
- Computer science
- Piano & Guitar
- Cinema

LANGUAGES

- French (Native)
- English (Advanced – IELTS C1 level)
- Spanish (Intermediate)
- Japanese (Beginner – JLPT N5)

Rémi Rossello

Software engineer

CAREER

Backend / AI developer 07/2026 - 10/2026

Histia - Freelance

- Developed a Python agentic AI system for extracting structured data from online and local sources for Histia. Built automated tests, benchmarks, and a UI to control it.
- Integrated it into Histia's backend architecture using Docker, PostgreSQL, and RustFS, working closely with the CEO, CTO, and web devs from HEC Paris, École Polytechnique, and CentraleSupélec.

RLHF Math expert 01/2025 - 06/2026

Scale AI - Freelance

- Writing, solving, and correcting original, peer-reviewed math problems at the undergrad level in linear algebra, statistics, probability, analysis, and geometry.
- Goal: train state-of-the-art LLMs with reinforcement learning by human feedback (RLHF).

Software and Data engineer 08/2024 - 09/2024

Center for Petrographic and Geochemical Research (CRPG) - Nancy - Internship

- Creation of a spectral camera simulator and lunar mineral classification program for a confidential lunar rover mission of the French Space Agency CNES.
- Included as second co-author in a scientific proceeding thanks to this algorithm.
- Self-taught in the "IDL" programming language.
- Collection of spectral data from lunar, martian, and meteoritic rock samples.

Software and test engineer 03/2024 - 06/2024

OffWorld Europe - Luxembourg - Internship

- Integration in a multidisciplinary team of engineers with 10+ nationalities.
- Creation of an image analysis program in Python in the context of experiments for the European Space Agency (ESA).
- Automated tests using LabView, PCBs, and sensors, on a TRL3 microwave system to extract volatile substances from lunar regolith.
- 3D CAD, materials selection, and procurement for lunar missions based on thermal, mechanical, chemical and radiation behaviour.

EDUCATION

Engineering Degree 09/2021 - 09/2024

École des Mines de Nancy

Courses on computer science, machine learning (Python), data analysis (R, MATLAB), and project management.

Preparatory Classes for the Grandes Écoles 09/2019 - 06/2021

Mathematics/Physics (MP) classes at CIV Valbonne

Specialization in computer science, both theory and practice (Python, OCaml)

PROJECTS AND ASSOCIATIONS

Personal website

- Self-taught learning of low-level tech (Assembly, C, Linux), then Full-stack development (AWS, PostgreSQL, Docker, TypeScript, NodeJS, React, Python)
- Made a full-stack personal website featuring AI and Science projects, using React, SQL and continuous deployment (Railway)

Projects at Mines de Nancy

- **Second-year project:** Team design of a cloud chamber using 3D printing and laser tools, demonstration of particle detection in a lecture hall.
- **First-year project:** Team design of a connected shelter for Boston Dynamics' SPOT robot dog, utilising machine learning.

Associations

- **Science & Mines:** Science articles and interviews for Mines students.
- **Astronomines:** Financial support activities for this astronomy club.
- **Music club:** Synth player.
